

Reflective Essays

Mike Zhang

In the software development process, the technical challenge encountered is mainly in the previous course learning, the learning programming algorithm is not enough for the software design in the actual software design, and in the previous course, there is almost no learning interface. Front-end design and development, which makes the development of the interface very difficult, and a variety of procedural errors, I think the required course of this course should include the actual application of the code learned before and the actual design of the interface front-end code.

The software engineering techniques I have learned in this course have made us really understand how to design a software project, step by step from the software pre-design to complete the programming as required, which greatly improves the time to complete the development of the program, and allows everyone in the group. Know what they need to do to improve the efficiency of programming

I think that usecase is the most useful for us, which makes us more smooth in the early design phase and the programming phase. We can design each part according to usecase in the programming phase.

I think PHP technology is the least useful to us because we didn't use it when we wrote the program, and we don't know about it.

I think the defined project is a very good template for me. If you define a new project of your own, you can be more experienced and you can exercise yourself.

As a member of the team, I think the biggest challenge is how to interface with each member's program, and it works well without problems.

I think this software development experience will allow me to have more experience in future software design, and I have a preliminary understanding of the division of labor in software design, which will greatly help my future graduation projects and employment.

I think UI design will be very helpful. Some people design the interface design is very good, some people are unsightly. The interface design is the most intuitive entrance for the user contact program, and it will give the user the most intuitive feedback. A person with very good UI design skills is very important for program development projects.

In general, I have found a lot of experience that I couldn't learn in my usual study. These experiences must be learned in person through program development. At the same time, I also know that I still have a lot to learn.
